Fence Rate Card

(effective May 1, 2023)

The First Fence NL temporary fencing system can meet all the requirements for site safety and security. The dark red fence panels are 9.5' feet in length and available in heights of four (4'), six (6') and eight (8') feet.

Each of the fence panels are built strong and stable to provide class-leading security in the fence rental industry. The fence panel's frame is custom engineered structural steel square tubing with wire mesh welded on the inside. The footing to support these panels is a solid metal base plate with a square round locking system yellow in colour for safety purposes. These bases can be anchored to the ground for extra stability.

The cap to keep these panels together is interlocking steel cap to strengthen the alignment and stability of the fence. The fence rental system can be installed as free standing fence panels, anchored or secured and modified for the custom needs of each application and event.
